

Industry partnership with the Scientix® STEM Alliance

The Scientix STEM Alliance provides a key opportunity for industry members interested in shaping the future of education to collaborate with European Schoolnet through Scientix.

Scientix is an initiative of European Schoolnet that promotes and supports a Europe-wide collaboration among science, technology, engineering, and mathematics (STEM) teachers, education researchers, policymakers, and other STEM education professionals. It has been running since 2010, organizing teacher training activities, dissemination conferences and events, and supporting the exchange of knowledge and experiences in STEM education via its portal, publications, and events.

Membership in the Scientix STEM Alliance means more than alignment with the overarching goal of advancing STEM education; it represents a strategic entry point for industry partners into the largest science education community in Europe. This affiliation empowers industry partners to actively influence the educational landscapes, engage with educators, and contribute to innovative teaching practices. Moreover, it facilitates valuable networking opportunities with Ministries of Education, policymakers, and other key players. This collaborative effort ensures a holistic approach to shape the future of STEM education and promoting the attractiveness and importance of STEM careers.
